

Wampler Metaverse and Terraform Plugins

Download & Installation Instructions

1. Download the latest version of the Plugin

Go to www.wamplerpedals.com/products/c/plugins/ and select the plugin and version for your system (PC or Mac). Wampler plugins support both Intel and Apple Silicon hardware.

2. Install the Plugin

Run the installer. When you open your DAW, look for each plugin wherever you would normally find your delay and modulation plugins (this varies from DAW to DAW). Each plugin now operates as single container, so you only need to load one plugin to access all programs.

3. Authorize the Plugin

The first time you run each plugin, enter your Software License Key or opt for a free 7-day trial.

Terraform in Rack Mode

Metaverse in Pedal Mode

Usage

- Click the hamburger menu in the top-left corner of the plugin to access options. From this menu, you can switch between Rack and Pedal mode. Rack mode provides a compact interface, while Pedal mode gives you a view and functionality similar to the actual pedal.
- Each plugin will display controls specific to the selected program. For example, in Metaverse, choosing TAPE or ETH adds controls for tape heads and subdivisions. In Terraform, selecting U-Vibe gives controls for Waveform.
- The On/Off switch enables/disables the effect.
- If the HOST SYNC switch is active (switch to the right), the delay or modulation will sync to your track's BPM, making the Delay Time (Metaverse) or Rate (Terraform) controller unnecessary. You can adjust subdivisions by clicking the subdivision indicator (Represented by a musical note).
- The Trails switch disables trails when off.
- Other controls function like their pedal equivalents, as explained in the Metaverse and Terraform Plugin Manuals.

Uninstalling

Windows: Uninstall from the 'add remove programs' interface

Mac: Run the Uninstaller app from the original installer package
